### 3. IMPORT DEVICES FROM BLUConsole TO BLUTrack

After setting BluConsole account data in the BluTrack **Settings** page, (which was described in the previous part), you can import all your devices. To import devices, click on the dropdown **Devices** menu from the top menu and choose **Download devices**. Once the download is completed, you will be redirected to **Your devices** page and see a message in the top part of the page with a list of all devices below.

The screenshot shows the BluTrack web interface. At the top, there is a navigation bar with the 'bluTrack' logo and several menu items: 'Transports', 'Devices', 'Administrators', 'Settings', and 'Logout'. On the right side of the navigation bar, there is a language selector 'pl en', a login status 'Login as: Demo', and a version indicator 'Industry 4.0'. The main content area is titled 'Settings'. A dropdown menu is open under the 'Devices' menu item, showing three options: 'Active devices', 'Errors' (with a count of 0), and 'All devices'. The 'Download devices' button is highlighted in blue. Below the dropdown, the 'Settings' form is visible, containing fields for 'Name' (with the value 'Demo'), 'Your login' (with the value 'demo@demo.pl'), 'Login BluConsole' (with the value 'demo'), 'Password BluConsole' (masked with dots), and 'Password confirm BluConsole' (masked with dots). At the bottom of the form are 'Save' and 'Cancel' buttons.

## 3. DATA ON YOUR DEVICES PAGE

In 10 columns we see the following data:

- Number
- Device number - device ID
- Name - name of the device from bluConsole or after update from BluTrack
- Temperature limits - from bluConsole or after update from BluTrack
- Temperature - last measured temperature
- Last place - name of the last place where the logger was detected
- Geo - latitude and longitude of the last place
- Status - device status
- Organization - organization the logger belongs to
- Actions
  - history - 24h history of position the logger
  - view - information about device and basic settings that can be altered in bluTrack

BluTrack will collect the information from bluConsole only if the **Status** of the device is set to **In use**. This can be done after clicking on the **View** button and then on tab called **Edit settings**.

## 4. HISTORICAL DATA

To access the historical data regarding the movement of all the devices within the hubs' range, you need to click on the **History** button on **Your devices** page. If a hub is already in the bluTrack database, the information such as the hub's place name, description and position will be displayed. If the hub is new the place name label will be set by default as "HUB: XXXXXXXX" where XXXXXXXX is the ID of the hub. The default position of unrelated hubs is set on 0,0 with empty description.

## 5. ADDING HUB INFORMATION TO BLUTRACK

For now this operation can be done only by one of the BluTrack's administrators under link <http://blutrack.eu/hubs>. If You want to add a localization, You should send to us the following data:

- place name
- place description
- your hub ID
- geolocalization points

## 6. TRANSPORTS

Transport is an additional functionality of bluTrack. It helps organize small transports. Each BluTrack user has his own transport list. To add a new transport, you need to go to **Transports** and then choose the option **Add transport**.
